

# South Florida Resilient Redesign

## Workshop Summary

Kingdom of the Netherlands

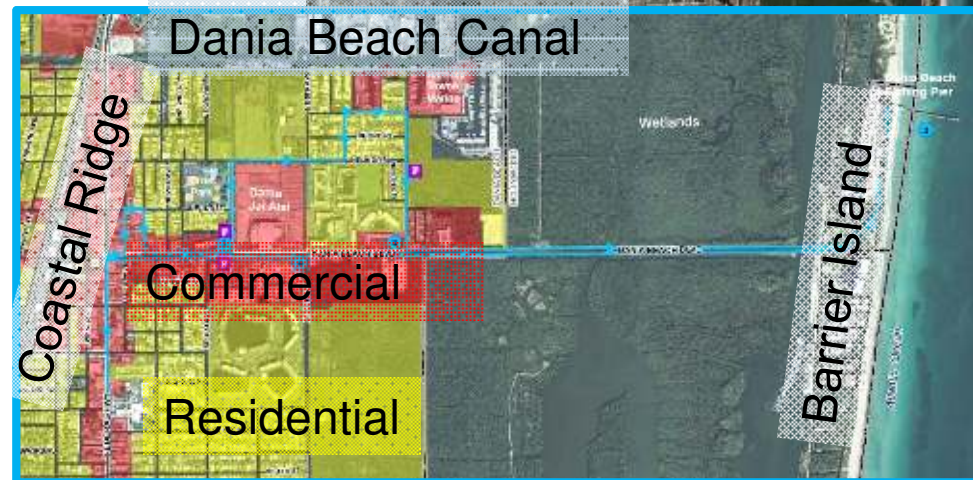

MIAMI CENTER FOR ARCHITECTURE & DESIGN

**AIA** Miami  
A Chapter of The American Institute of Architects

## Site Overview

- City of Dania Beach
  - Population ~ 30,000
  - \$44,500 median income
- East Dania Beach Boulevard is main corridor
- Economy depends on
  - Tourism- beach
  - Marine industry
  - Small business

## Characteristics

Multi-family/ Small Business/  
Jai Alai

Historic

Small Business

Evacuation Route

Commercial Corridor

# Natural Infrastructure

West Lake Mangrove Wetland

Dania Beach

# Site Topography

Elevation in Feet NAVD

Storm Surge Limit

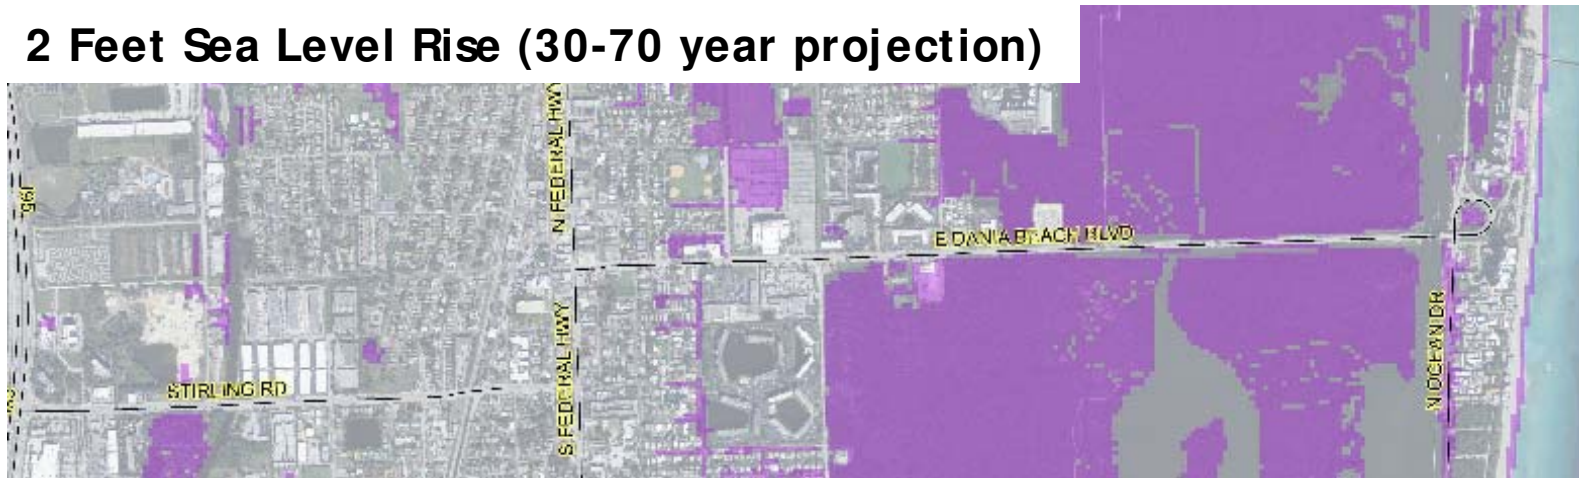

# Team Focus

- Underutilized assets & economic opportunities
  - Natural infrastructure (beach and wetlands)
  - Airport (new runway)
  - Rail passenger transport
  - Port expansion
  - Population growth (40%)
- Flood hazards
  - SLR, surge, rainfall
- Limited infrastructure resilience

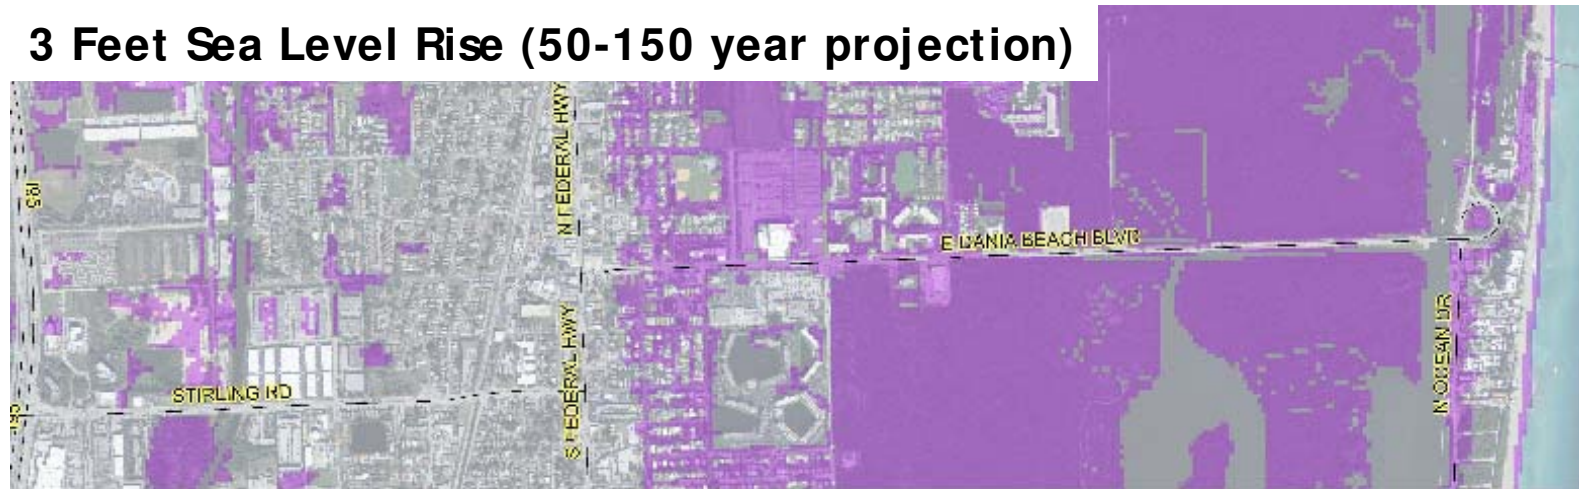

# Vulnerability to Climate Change

**2 Feet Sea Level Rise (30-70 year projection)**

**3 Feet Sea Level Rise (50-150 year projection)**

 Flooding

# Design Concepts

Urban: East Dania Beach Boulevard

# Urban Densification at City Center

- City Center
  - Vertical expansion
  - Invest along ridge
  - Evacuation shelter
  - Layered design

- Marina Expansion
  - Build adaptively
  - Hotel area

# Enhancement and Multi-purposing of Natural Infrastructure

- Resiliency Center and Wetland Bike Path
- Mangrove restoration

- Dune (barrier island) enhancement with underground parking
- Reef enhancement

# Flood Control

- Polder
  - Raise perimeter roads to act as levees
  - Add pump system
  - Incorporate canals

Polder

## Interconnectivity

# Team Recommendations

- Consider regional context
- Develop long term plan with strategic approach
  - Decision making process
  - Community engagement
- Consider temporal scale of planning
- Develop a roadmap
  
- Use concepts as inspiration!

# Implementation of Prototype

- Urban communities in South Florida
  - Strategic investment and densification in dry areas
  - Maximize potential economic opportunities to facilitate resilient redesign of infrastructure
  - Integration of natural infrastructure
  - Active flood control of low lying areas where and when feasible

# Next steps

- Idea refinement process
  - Resilient redesign is an evolutionary process
  - Cultivate agreement upon a shared vision
  - Seize moments of opportunity
- Follow-up workshop with local officials
  - Get officials to champion concepts
  - Local implementation strategies
- Design concept outreach
  - Booklet/ Brochure
  - Mini- design workshops for decision-makers
- Identify funding opportunities
