

Regional Climate Action Plan Resources

The Compact developed a comprehensive set of curated resources to support local governments, agencies, regional councils, regional resource management districts, and other local planners and practitioners in advancing the recommendations outlined in the Compact's [Regional Climate Action Plan \(RCAP 2.0\)](#). Covering nearly all 142 RCAP recommendations and organized by RCAP topic areas, the resources offer vetted local case studies, example policy, data tools, and other guides to support localities designing and implementing emissions reduction and resilience-building activities and policies.

[Agriculture](#) These resources offer local case studies, example policy, data tools, and other guides to support the continued viability of agriculture in Southeast Florida in the face of climate change.

[Energy and Fuel](#) These resources offer local case studies, example policy, data tools, and other guides to support reduced consumption of electricity and fuel, and increased renewable energy capacity.

[Natural Systems](#) These resources offer local case studies, example policy, data tools, and other guides to support natural systems and improve their capacity for climate adaptation.

[Public Health](#) These resources offer local case studies, example policy, data tools, and other guides to mitigate climate-related public health risks.

[Public Outreach and Engagement](#) These resources offer local case studies, example policy, data tools, and other guides to help build public awareness of the climate-related risks facing Southeast Florida and the opportunities for early, coordinated action.

[Public Policy Advocacy](#) These resources offer local case studies, example policy, data tools, and other guides to support climate action policies, programs, and legislation.

[Regional Economic Resilience](#) These resources offer local case studies, example policy, data tools, and other guides to support public and private investments and the economic integrity of the region in the face of climate change.

[Risk Reduction and Emergency Management](#) These resources offer local case studies, example policy, data tools, and other guides to support coordinated and interdisciplinary risk reduction and emergency management planning and investment.

[Social Equity](#) These resources offer local case studies, example policy, data tools, and other guides to support equitable climate policies, programs, and decision-making processes that consider local socioeconomic and racial inequities.

[Sustainable Communities and Transportation](#) These resources offer local case studies, example policy, data tools, and other guides to support changes in the built environment to adapt to the impacts of climate change and reduce greenhouse gas emissions.

[Water](#) These resources offer local case studies, example policy, data tools, and other guides to advance the water management strategies and infrastructure improvements needed to mitigate the potential adverse impacts of climate change and sea level rise on water supplies, water and wastewater infrastructure, and water management systems.
